

Full Stack Developer

Tech Stack: Golang + FastAPI + Next.js + PostgreSQL

Estimated Time: 10–14 hours

Submission Date: Within 7 days of receiving this email.

Task: Mini Project Management API + Dashboard

Build a small system:

A company manages projects and tasks assigned to users.

Backend Requirements

Stack Options

- Golang (Gin or Fiber) OR
 - FastAPI (Python)
 - PostgreSQL
 - Proper DB migrations
-

1. Database Design

Users

- id
- name
- email
- role (admin / developer)

Projects

- id
- name
- description
- created_by

Tasks

- id
 - title
 - description
 - status
 - project_id
 - assigned_to
 - due_date
-

2. API Requirements

Auth

- JWT authentication
 - Login endpoint
-

CRUD APIs

Users

- Create user
- List users

Projects

- Create project
- List projects
- Update project
- Delete project

Tasks

- Create task

- Assign task
 - Update status
 - List tasks (with filtering)
 - By project
 - By status
 - By assigned user
-

3. Advanced API Requirements

- Pagination
 - Proper HTTP status codes
 - Validation
 - Error handling
 - DB transactions
 - Proper layered architecture
-

4. Documentation

Must submit:

-  Postman collection JSON
 -  Environment variables file example
 -  README with:
 - Architecture explanation
 - ER diagram
 - Setup steps
 - API documentation
-

Frontend (Basic Required)

Create a minimal Next.js frontend:

- Login page
- Project list
- Task list
- Create task modal

Focus more on backend quality than UI beauty.

Bonus Points

- Docker setup
 - Swagger documentation
 - Role-based access control
 - Unit tests
 - Clean architecture pattern
-
